## “OPEC Finds Few Options to Put a Lid on Oil Prices”

The signs are all there for a perfect storm. Global demand for oil is surging, supplies are tight, and geopolitical jitters are sending almost daily shock waves through the markets...

ESP 1000 Electronic Speed Pilot

### What are you doing about higher fuel prices in you fleet?

It's a simple fact. As fuel prices rise, your profits shrink. But what can you do? The obvious answer is to do the same work using less fuel. But that's not possible right? Well, not quite.

### Its time to start a new tradition!

We've been in this industry for over 20 years and know all about its love of tradition. Sure, your vessels have cellular telephones, email, electronic charts and even internet access. But what about propulsion control? Same old same old right:

### 21st Century propulsion control.

Why not just select the speed you want and have the RPM adjust automatically to maintain it? Or, have vessel speed adjust automatically based on distance travelled and your desired ETA? Imagine how much easier it would be to arrive on time. With an ESP 1000 Speed Pilot, you can do all this and more.

### Technology you can't afford to be without.

Why worry about arriving a little early, or leaving a bit late? On a 2000 mile trip, if the vessel leaves 2.5 hours late, it will burn an extra 1000 gallons of fuel just to arrive on time. Or, if it arrives 2.5 hours early, that's 1000 gallons of fuel wasted! The Speed Pilot isn't just about precision speed control. It also reduces wasteful propeller slippage. So even if your vessels have to run flat out all the time, the Speed Pilot can still reduce your fuel bill up to 9 percent, with no loss in speed.

### Payback in less than one year.

Typical savings range from 1 to 2 dollars per horsepower per month. On a 6000 Hp vessel, an ESP 1000 Speed Pilot system will pay for itself in just 4 to 7 months. Imagine, saving \$6,000 to \$12,000 dollars a month on just one boat! That will definitely help your bottom line.

Put a lid on inefficient vessel operation, equip your fleet with the ESP 1000 Electronic Speed Pilot.
