

It's 22:00 Hrs Do You Know Where Your Fleet is?

ESP 1000 Speed Pilot system
integrates Waveburst web
based satellite tracking and
text messaging.

A screenshot of a web-based map interface. The map shows a coastal area with several islands and a bay. Five red crosses are plotted on the map, numbered 1 through 5, indicating the last five position fixes of a vessel. The crosses are located near islands like Mungahit and Tuzo Wilson. The interface includes a 'Map Pan' control, a zoom slider, and a 'Click Map to: Recenter' button. The copyright notice '© 2000 DeLorme' is visible in the bottom left corner.

The Website Map function automatically plots the last 5 position fixes from the vessel on a detailed map. Vessel location appears as a red "X". Numbers beside each "X" indicate chronological order (1 = most recent). Pan and zoom controls let you adjust map resolution and viewing area.

Monitor Your Fleet Via the Internet

Using your PC and a private secure website, you can pinpoint the location of any vessel and view its status. Automatic status reporting delivers hourly updates to your desktop. A daily summary report provides main engine running hours, fuel used and distance travelled for the 24-hour period. With the system's polling function, you can request an immediate status report from any vessel.

Advanced Text Messaging too

Internet based text-messaging let's any department in your organization communicate with the vessel in real time, from any PC. The system also supports panic alarms, file transfer and remote diagnostic of the vessel's propulsion system.

Improve Communications and Your Bottom Line

For more information on how the Stellar Marine Speed Pilot and Waveburst Communications can enhance your fleet,
